Hardened Bedknives that stay sharp and last longer

At John Deere, we're committed to providing hardworking, long-lasting parts for your operation. That's why we created our **Hardened Insert Bedknives**. These bedknives are engineered from hardened steel so they stay sharp and last longer than conventional bedknives. This design results in reduced maintenance and adjustments, and a sharper edge for optimum cut quality over the lifetime of the bedknives.

Because these John Deere bedknives are created from hardened steel, technicians can expect to spend less time backlapping, grinding and changing bedknives during the growing season. This translates into reduced time and labor.

These bedknives are available to install on Quick Adjust 5 (QA5 22") and QA7 22"/26" cutting units.

Available on JDParts.com and through John Deere dealers.

Quality parts. Real solutions. Only from John Deere.
